- ## Auto-Switching function

The scaler switcher have auto-switching mode and manual-switching mode.when the user select auto-switching mode, It will follows the following principles:

### 5.5.1.New input principle

Once a new input signal is detected, the scaler switcher will switch to this new signal automatically.

### 5.5.2. Power rebooting principle

The scaler switcher offers the function to remember the signal last used after rebooting. Once rebooted, it will automatically enter auto-switching mode, and then detect all inputs and memorize their connection status for future reboots. If the last used input signal is still available, then it will choose that signal. If not, it will detect all input signals with priority on HDMI1->HDMI2->HDMI3->HDMI4->VGA(YPbPr/CVBS).

### 5.5.3.Signal removing principle

Once the current signal is removed, the scaler switcher will detect all input signals with priority on HDMI1->HDMI2->HDMI3->HDMI4->VGA(YPbPr/CVBS). It will transfer the first signal detected to the output.

Notice: Auto-switching function works only when there is a new input signal or if an input signal is removed.

- ## VGA/YPbPr/CVBS input

The VGA input port is a **multiple** format port , It can compliant with VGA/YPbPr/CVBS input signal. The scaler switcher will auto detect the input signal type and format. The user can use the convert cable for YPbPr or CVBS signal input.

- ## Operations of RS232 Control
