

OPERATING MANUAL

MC-4

ADAT™-AES3-S/P-DIF DIGITAL AUDIO FORMAT AND SAMPLING RATE CONVERTER

V2

SAFETY INSTRUCTIONS

General instructions

To reduce the risk of fire or electrical shock, do not expose this appliance to rain or moisture, direct sunlight or excessive heat from sources such as radiators or spotlights. No user serviceable parts are inside. Repair and maintenance must be carried out by qualified personnel authorized by MUTECH GmbH! The unit has been designed for operation in a standard domestic environment. Do NOT expose the unit and its accessories to rain, moisture, direct sunlight or excessive heat produced by such heat sources as radiators or spotlights! The free flow of air inside and around the unit must always be ensured.

CAUTION
RISK OF
ELECTRICAL SHOCK!

Initial operation

Prior to the initial operation of the unit, the appliance, its accessories and packaging must be inspected for any signs of physical damage that may have occurred during transit. If the unit has been damaged mechanically or if liquids have been spilled inside the enclosure, the appliance may not be connected to the mains or must be disconnected from the mains immediately! If the unit is damaged, please do NOT return it to MUTECH GmbH, but notify your dealer and the shipping company immediately, otherwise claims for damage or replacement may not be granted.

If the device is left in a low-temperature environment for a long time and then is moved to a room-temperature environment, condensation may occur on the inside and the exterior. To avoid short-circuits and flashovers, be sure to wait one or two hours before putting the device into operation.

Power supply

The device contains a self-adapting wide-range power supply supporting the majority of global standard line voltages within a range of 90...250 V, with no need for making adjustments. Make sure that your line-voltage source provides a supply voltage within the specified range. In addition, make sure that the device is properly grounded via the local electric installation.

Please use the enclosed power cord (see packaging) to connect the unit to the mains. Switch the unit off before you attempt to connect it to the mains. Connect the power cord to the unit, then to a standard 3-pin mains outlet. To draw the power cord, never pull on the cable but on the mains plug!

The unit must be grounded during operation!

For information on the power-inlet wiring, refer to the »Wiring of connectors« section in the appendix. Disconnect the device from the mains when not using it for an extended period!

This symbol, a flash of lightning inside a triangle, alerts you to the presence of uninsulated dangerous voltage inside the enclosure - voltage that may be sufficient to constitute a risk of shock.

This symbol, an exclamation mark inside a triangle, alerts you to important operating or safety instructions in this manual.

Declaration of Conformity

We herewith confirm that the product complies with the European Commission's standards on electromagnetic compatibility.

Interference emission: EN 50081-1, 1992
Resistance to interference: EN 50082-1, 1992

Presupposed as operation condition is that all clock outputs are connected with high-quality and good shielded BNC 75 ohms cable.

WARRANTY REGULATIONS

§1 Warranty

MUTECH GmbH warrants the flawless performance of this product to the original buyer for a period of two (2) years from the date of purchase. If any failure occurs within the specified warranty period that is caused by defects in material and/or workmanship, MUTECH GmbH shall either repair or replace the product free of charge within 90 days. The purchaser is not entitled to claim an inspection of the device free of charge during the warranty period. If the warranty claim proves to be justified, the product will be returned freight prepaid by MUTECH GmbH within Germany. Outside Germany, the product will be returned with the additional international freight charges payable by the customer. Warranty claims other than those indicated above are expressly excluded.

§2 Warranty transferability

This warranty is extended exclusively to the original buyer who bought the product from a MUTECH GmbH specialized dealer or distributor, and is not transferable to anyone who may subsequently purchase this product. No other person (retail dealer, distributor, etc.) shall be entitled to give any warranty promise on behalf of MUTECH GmbH.

§3 Warranty regulations

The return of the completed registration card, or online registration on one of the websites specified below, is a condition of warranty. Failing to register the device before returning it for repair will void the extended warranty.

- The serial number on the returned device must match the one stated on the registration card or entered during online registration. Otherwise, the device will be returned to the sender at the sender's expense.
- Any returned device must be accompanied by a detailed error description and a copy of the original sales receipt issued by a MUTECH dealer or distributor.
- The device must be returned free of shipping expenses and in the original package, if possible; otherwise, the sender has to provide comparably protective packaging.
- The sender is fully responsible for any damage or loss of the product when shipping it to MUTECH GmbH.

§4 Limitation of warranty

Damages caused by the following conditions are not covered by this warranty:

- Damages caused by every kind of normal wear and tear (e.g. displays, LEDs, potentiometers, faders, switches, buttons, connecting elements, printed labels, cover glasses, cover prints, and similar parts).
- Functional failure of the product caused by improper installation (please observe CMOS components handling instructions!), neglect or misuse of the product, e.g. failure to operate the unit in compliance with the instructions given in the user or service manuals.
- Damage caused by any form of external mechanical impact or modification.
- Damage caused by the user's failure to connect and operate the unit in compliance with local safety regulations.
- Damage caused by force majeure (fire, explosion, flood, lightning, war, vandalism, etc.).
- Consequential damages or defects in products from other manufacturers as well as any costs resulting from a loss of production.

Repairs carried out by personnel which is not authorized from MUTECH GmbH will void the warranty. Adaptations and modifications to the device made with regard to national, technical, or safety regulations in a country or of the customer do not constitute a warranty claim and should be set with MUTECH GmbH in advance.

§5 Repairs

To obtain warranty service, the buyer must call or write to MUTECH GmbH before returning the unit. All inquiries must be accompanied by a description of the problem and the original buyer's invoice. Devices shipped to MUTECH GmbH for repair without prior notice will be returned to the sender at the sender's expense. In case of a functional failure please contact:

MUTECH Gesellschaft fuer Systementwicklung und Komponentenvertrieb mbH
Siekeweg 6/8 • 12309 Berlin • Germany • Fon 030-746880-0 • Fax 030-746880-99 • Tecsupport@MUTECH-net.com • www.MUTECH-net.com

INTRODUCTION

Thank you very much for purchasing the MC-4, Digital Audio Format and Sampling Rate Converter, from MUTECH!

General Function Description

The MC-4 is an extremely flexible, high-performance digital audio format and sampling rate converter for ADAT™, AES3 and S/P-DIF. All digital audio signals can be processed with 8 channels and sampling rates up to 192.0kHz, whereas unidirectional and bidirectional conversion modes are available. Based on latest FPGA designs, the MC-4 achieves levels of performance regarding its signal quality, unique flexibility, clocking features and the 16 channel sampling rate conversion engine (SRC), which are outstanding in today's industry!

Various operation modes enable the use of the MC-4 in many studio set-ups. Generally, incoming digital audio signals are converted to all three audio formats simultaneously, with or without SRC functionality. The SRC engine can be locked to Word Clock, AES11 and any digital audio input in both, unidirectional and bidirectional operation modes.

Furthermore, the MC-4 offers an internal, low-jitter clock base with high accuracy to which the SRCs can be locked to, if no external reference is available. This enables to run the MC-4 in set-ups where no separate master clock is available. Furthermore, in this operation mode the MC-4's Word Clock output supplies a low-jitter reference clock signal which is of same high accuracy as the internal clock base. This can be used e.g. as master clock reference for the whole studio.

This all makes MC-4 for sure a unique and the most flexible digital audio multichannel converter in a 1/2 19" case currently available in the market!

MC-4 Features

- ADAT™, AES/EBU and S/P-DIF interfaces in one box.
- Bidirectional format and sampling rate conversions from 32.0kHz to 192.0kHz.
- Converts standalone and bidirectionally with different sampling rates: X-SRC
- Supports ADAT™, SMUX2 and SMUX4 standards.
- Signal improvement through low-jitter clock recovery.
- AES11, Grade 1, internal reference clock.
- Low-jitter Word Clock output can be used as master clock reference.
- Runs standalone without needing an external clock source.
- 16 channel SRC engine for bidirectional conversions.
- Extremely flexible synchronization options.
- Continuous signal supply in absence of the reference audio or clock signal
- Separate AES11 reference clock input.
- Simultaneous conversions to all output formats.
- Easy configurable.
- User's settings will be stored after switching-off.
- Rack space saving 1/2 19" housing allowing for mounting two devices in one rack unit.
- Built-in international power supply.

MC-4 Applications

- Interconnection of consumer and professional digital audio devices.
- ADAT™ + SMUX2/4, AES3 and S/P-DIF format and sampling rate conversions.
- Integration of non-synchronizable devices into digital studio environments.
- Clock recovery and digital audio signal regeneration.
- Realtime bidirectional signal transfer between send/returns of digital mixing consoles and effect processors.
- Unidirectional or bidirectional interconnection of computer-based sound cards with professional digital audio equipment.
- ADAT™ signal splitting and distribution.
- Usable within small studio set-ups up to broadcast installations.

The grey boxes contain supplementary information for the corresponding sections in the text columns. The content of the individual box refers to the description in the text column beside the box.

 Boxes which contain a triangle with an exclamation mark inside should be read carefully! These include additional information which are of major importance for the functional descriptions in the text column.

 **Register your MUTECH Product for Warranty and Support!**
We ask you to be so kind to register your MUTECH product through our website immediately after purchasing. This ensures full warranty services over a period of two years after purchasing the product. Moreover, for all registered products we offer to our customers technical support. We also will inform you about product updates and new products which may of interest for you (on voluntary base, of course).
Please register your product at:
www.MUTECH-net.com
> SERVICES, > MUTECH Product Registration

Peripheral MUTEC Products

Reference Clocks and Master Clocks for Synchronization:

- **iCLOCK + iCLOCKdp**
iCLOCK and iCLOCKdp are synchronizable, high-precision clock generators which are designed to be the reference in digital audio and video studios as well as broadcast and television stations. For further details please visit:
www.iCLOCK-net.com
- **MC-3**
The MC-3 SMART CLOCK is an universal digital audio master clock generator. The unit provides different high-stable and Ultra low-jitter clock signals for synchronization of various digital audio devices.
- **MC-3.1**
The MC-3.1 SMART CLOCK SD is an universal digital audio and SD video sync master clock generator. The unit provides different high-stable clock signals for simultaneous synchronization of digital audio and SD video devices.
- **MC-3.2**
The MC-3.2 SMART CLOCK HD is an universal digital audio and SD/HD video sync master clock generator. The unit provides different high-stable clock signals for simultaneous synchronization of digital audio and SD/HD video devices.

Signal Distributors

- **MC-2**
The MC-2 is a high-performance digital audio and reference clock signal distribution amplifier and format converter for AES3/11 and AES3/11id signals.
- **MC-7**
The MC-7 is a flexible, high-performance 8-channel Word Clock distribution amplifier and audio clock converter.

Cables for Digital Audio:

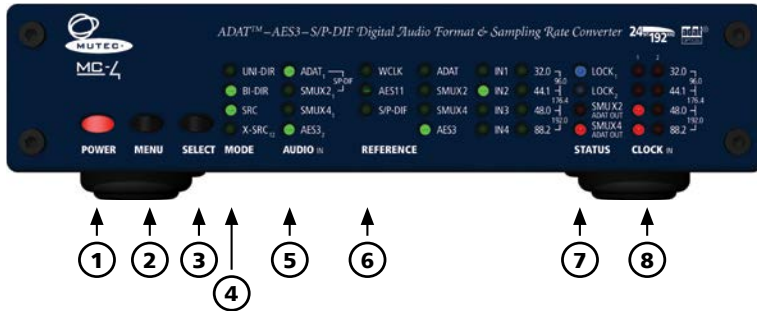

- Optical cables in different lengths from 0.5 m to 20 m for ADAT™ transfers.
- Multicore cable adaptors with 110Ω cable impedance and Neutrik™ XLR connectors from 0.6 m to 5 m.

For all peripheral products please have a look on our website:
www.MUTEC-net.com!

CONTROL ELEMENTS AND TERMINALS

MC-4 Front Panel

- 1 POWER**
This red LED lights up when the unit is switched on with the rear panel POWER switch.
- 2 MENU**
This key selects one of the available function menus.
- 3 SELECT**
Use this key to select a function within a specific function menu.
- 4 MODE**
This function menu allows to select all available conversion modes.
- 5 AUDIO IN**
This function menu allows to select the digital audio formats which should be converted with the previously selected conversion mode.
- 6 REFERENCE**
This function menu allows to select the master clock reference for synchronization of the selected format conversion mode as well as the SRCs.
- 7 STATUS**
This menu indicates various signal statuses of the incoming master clock reference signal and the digital audio signal as well as the SMUX coding of the ADAT™ output signal.
- 8 CLOCK IN**
This menu indicates the clock rates of the incoming digital audio signal or of the master clock reference signal.

Refer to the chapter »OPERATIONS« for more information.

MC-4 Rear Panel

- 1 AES11 REF IN**
This input receives a balanced digital AES11 blank frame signal in compliance with AES11–1997/2003 as master clock reference for the SRCs. Alternatively, an AES3 digital audio signal in compliance with AES3–1992 (R1997) or a S/P-DIF digital audio signal aligned to IEC60958 can be input. The input impedance is 110Ω (XLR connector, female).

For detailed specifications on all terminals, refer to the »Pin Assignment of the Connectors« and »Technical Data« in the chapter »APPENDIX«.

INSTALLATION

Content of the Box

The unit was packed carefully. Nevertheless we recommend to check the content directly after opening the package:

- 1 x MC-4
- 1 x Power cable
- 1 x Manual

Placing the Device

The unit should be set up as closely as possible to the devices to which it will be connected, so as to avoid excessive cable lengths. Use the 4 rubber feet enclosed with the appliance and stick them symmetrically on the bottom side of the unit to protect the enclosure and supporting surface from being damaged.

The device can be mounted into a standard 19" rack and will require 1 unit. In this case, the rubber feet cannot be attached. Install the device so that one unit of rack space is left free both above and below the device to allow for sufficient ventilation! The mounting depth including the terminals is 160 mm/6.7". Another 60 mm/2.4" should be added for the required cables.

Additional slide-in rails on the rack inside are recommended for safe installation. This will also avoid long-term mechanical deformation of the housing.

Wiring the optical ADAT™, AES/EBU and S/P-DIF interfaces

ADAT™
Connect the optical ADAT™ interfaces with the help of TOSLINK™-compliant optical fiber cables. Here, you can use both plastic and glass fiber-based cables. When using plastic fiber cables, lengths of 10 meters should not be exceeded, so as to ensure the reliable transmission of signals. Glass fiber cables can transfer data reliably even over greater distances.

AES/EBU
Connect the AES/EBU interface with the help of an electrical 25-cond. cable equipped with 25-pin D-Sub connectors. The specifications stipulate a specific cable resistance of 110Ω. When purchasing the cable ask your retailer for a confirmation that the cable will perform flawlessly in your specific application.

Connect the coaxial S/P-DIF interfaces with help of unbalanced electrical cables equipped with cinch connectors on both ends. The specifications stipulate a specific cable resistance of 75Ω. Ask your retailer for a confirmation of this value when purchasing the cables.

Wiring the Word Clock Interfaces

To allow for the synchronization of signals, the interfaces of all devices involved must be properly connected to each other, so as to ensure a logical signal flow. Always be sure to connect the Word Clock output of the MC-4 to the corresponding input of the device you wish to synchronize. Cable lengths should be kept as short as possible to minimize signal losses and/or interferences!

For the transmission of Word Clock signals electrical, unsymmetrical cables with a resistance of 75Ω and BNC connectors on both ends are used. Typically, such cables are marked »RG-59U, RG59B/U«.

Additionally, you should make sure that the Word Clock input to be connected to the MC-4's output have a 75Ω terminating resistor! Most Word Clock inputs allow for enabling/disabling the termination with a so-called »termination-switch«, which may be located on the outside or inside of the device.

For devices which have no termination of the Word Clock input, e.g. RME Hammerfall with Word Clock i/o, Alesis BRC or M-Audio ProFire Light-

The condition of the packaging material and the device should be checked carefully additionally. If there are any damages please refer to SAFETY INSTRUCTIONS, Initial Operation, and WARRANTY REGULATIONS.

 **Before installing the unit the section SAFETY INSTRUCTIONS located at the beginning of this manual should be read carefully.**

 **Never expose the device and accessories to rain, moisture, direct sunlight, or excessive heat produced by radiators, heaters, or spot lights! Sufficient air circulation in the environment of the device must be ensured!**

MUTEC offers optical cables of various lengths that have been specifically tested for the transmission of ADAT™ signals. Ask your local dealer for those cables!

 **We advise you not to buy 25pin D-Sub cables from your computer retailer! Even though such cables may look similar to 25pin D-Sub AES/EBU cables, they may be wired differently!**

MUTEC assumes no liability for damages resulting from the use of improperly wired cables!

Especially when working with high AES/EBU clock rates well shielded cables are imperative to avoid increased radiation! Standard cables are normally useable for clock rates up to 50.0kHz. Special shielded cable material should be used for transfer of higher clock rates.

 **Please make sure that the cable used has a resistance of 75Ω! If a cable with a different resistance is used, a dramatic deterioration of the signal quality can be the result! In this case, the perfect synchronization could be impaired.**

We recommend using high-grade cables with a good shielding. A length of max. 10 meters (approx. 30feet) should not be exceeded!

INSTALLATION

bridge, you can use an additional BNC-T piece to terminate the input. Plug the T piece with its center connector into the input of the receiving device. Then, connect the cable coming from the MC-4's Word Clock output to one of the lateral connectors, and the other connector of the BNC-T piece to a 75Ω resistor forming the BNC termination.

Basically, you should avoid »looping through« Word Clock leads by means of passive BNC-T pieces to preserve the signal quality, as level drops will be the result. If there is no other way to wire your set-up, please make sure that all Word Clock inputs (except for the last device in the chain) have their terminations disabled! In a serial Word Clock chain only the last clock input should have a termination! Never connect more than three devices in series to one output!

GENERAL OPERATION

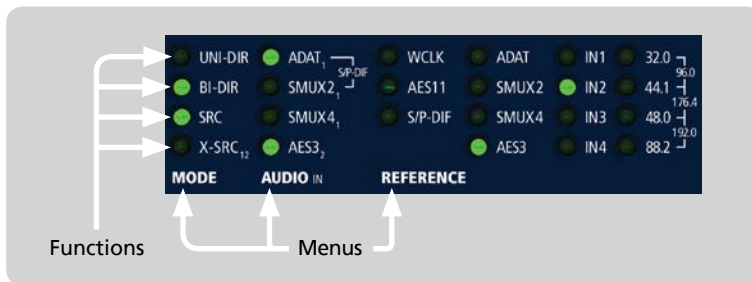

Selecting Function Menus and setting Functions

The device is fully operated using the two toggle switches at the front panel.

- 1 Switching the »MENU« button toggles between different basic function menus.
- 2 Switching the »SELECT« button activates individual functions within one function menu.

MENU + SELECT operation

Function Menus + Functions

Steps of Operation

- 1 First press on »MENU« or »SELECT« key enables the last selected function within the last selected function menu. The corresponding LED is beginning to flash.
- 2 Every press on »SELECT« button selects a new function within a menu. The LED of the selected function flashes accordingly. After the LED stops flashing, the function is activated.
- 3 When the needed function is selected, do not press the switches again! After a period of approximately 4 seconds the LED of the selected function stops flashing.

The »STATUS« and »CLOCK IN« areas are not accessible by using the »MENU« and »SELECT« keys, because they only inform about different conditions of incoming signals.

Safety Instructions

! For safety reasons, be sure to read the SAFETY INSTRUCTIONS and INSTALLATION chapters before first powering-up! We also recommend reading the CONTROL ELEMENTS AND TERMINALS chapter for information on how to connect the device!

Shut-Down of Outputs

! All digital audio outputs are shut-down during function selection! After a function is finally selected and the corresponding LED lights constantly again, the digital audio outputs are activated for signal transfer.

User Settings Remain

! All user-specific function settings are available furthermore when power is restored.

Unidirectional Format and Sampling Rate Conversions

| | | | | | |
|---|--|---------------------------------------|-----------------------------|---|---|
| <input checked="" type="radio"/> UNI-DIR | <input checked="" type="radio"/> ADAT ₁ S/P-DIF | <input checked="" type="radio"/> WCLK | <input type="radio"/> ADAT | <input type="radio"/> IN1 | <input type="radio"/> 32.0 _{96.0} |
| <input type="radio"/> BI-DIR | <input type="radio"/> SMUX2 ₁ | <input type="radio"/> AES11 | <input type="radio"/> SMUX2 | <input type="radio"/> IN2 | <input type="radio"/> 44.1 _{176.4} |
| <input checked="" type="radio"/> SRC | <input type="radio"/> SMUX4 ₁ | <input type="radio"/> S/P-DIF | <input type="radio"/> SMUX4 | <input type="radio"/> IN3 | <input type="radio"/> 48.0 _{192.0} |
| <input type="radio"/> X-SRC ₁₂ | <input type="radio"/> AES3 ₂ | <input type="radio"/> AES3 | <input type="radio"/> IN4 | <input type="radio"/> 88.2 _{192.0} | |
| MODE | AUDIO IN | REFERENCE | | | |
| | | | | External Clock References | Internal Clock Reference |

This setting e.g. allows to receive an ADAT™ signal with up to 50.0kHz sampling rate. The signal's audio format will be converted into AES3, S/P-DIF and ADAT™ or SMUX2/4 simultaneously, as in the previous section described. Additionally to the format conversion a SRC process is added.

The sampling rate of all outputs now depends on the clock rate of the reference clock signal, which is selected in the »REFERENCE« menu. The above example shows Word Clock (»WCLK«) selected as clock reference, which is the default setting.

In this mode, the following clock references are available for synchronization of the internal SRCs:

- WCLK, SCLK
- AES11 (through separate input at the rear)
- AES3 IN1–4, every of the AES3 stereo inputs
- Internal clock oscillator

To activate a clock source enter the »REFERENCE« menu by pressing the MENU key and press the »SELECT« key repeatedly. When the external clock reference signal can be successfully locked, the blue LED »LOCK₁« in the »STATUS« menu lights constantly and the clock rate of the clock source is displayed in the »CLOCK IN« menu under »1«.

Individual AES3 Input Signals

Running the MC-4 in the SRC mode, the clock rates of individual AES3 input signals can be totally different within a range of 25.0kHz to 200.0kHz. It is also not necessary to feed in signals at all four AES3 inputs. The input assignment is passed to the outputs.

Further Setting Examples

| | | | | | |
|---|--|--|-----------------------------|---|---|
| <input checked="" type="radio"/> UNI-DIR | <input type="radio"/> ADAT ₁ S/P-DIF | <input type="radio"/> WCLK | <input type="radio"/> ADAT | <input type="radio"/> IN1 | <input type="radio"/> 32.0 _{96.0} |

| <input type="radio"/> X-SRC ₁₂ | <input type="radio"/> AES3 ₂ | <input type="radio"/> AES3 | <input type="radio"/> IN4 | <input type="radio"/> 88.2 _{192.0} | |
| MODE | AUDIO IN | REFERENCE | | | |

Unidirectional format with sampling rate conversion from S/P-DIF coaxial to AES3, SMUX2. When the internal clock basis is selected as clock reference with 96.0kHz, the ADAT™ output signal is automatically converted into SMUX2 at the optical outputs. When sampling rates less than 88.2kHz are selected, unidirectional conversion to an 8 channel ADAT™ signal is possible from the 4 S/P-DIF inputs.

Formats accepted via AES/EBU inputs

The MC-4's AES/EBU inputs generally accept AES3, AES11 and S/P-DIF signal formats for conversion to the available output formats.

ADAT™/SMUX Adaption with SRC Option

Does the reference clock signal not exceed 50.0kHz, both optical outputs transmit the same ADAT™ signal and the MC-4 functions as ADAT™ signal splitter.

If the reference clock exceeds 50.0kHz, the optical output format will automatically change to »SMUX2« or »SMUX4«, depending on the reference signal's clock rate. The corresponding SMUX format of the optical outputs is displayed in the »STATUS« menu.

Locking so-called »Super Clocks«

Your MC-4 is able to lock so-called »Super Clock« (SCLK) reference signals. These clock signals are used preferably for older digidesign ProTools™ MX systems. Specified are only two clock rates, 11.2896MHz + 12.288MHz, which are the x256 multiples of the Word Clock rates 44.1kHz and 48.0kHz.

When locking one of these Super Clocks, the rate will be inverted displayed in the »CLOCK IN« menu. Thus, the LED in front of the corresponding base clock rate, that means Word Clock rate, does not light while all other LEDs light (see examples below).

| MODE | AUDIO IN | REFERENCE | | | |

This setting allows e.g. to receive an ADAT™ signal with up to 50.0kHz sampling rate and an 8-channel AES3 signal between 25.0kHz and 200.0kHz simultaneously. The optical ADAT™ input signal is converted to AES3 and the AES3 signals are converted to ADAT™ or SMUX2/4, depending on the clock rate of the reference clock signal. The four AES3 stereo input and the ADAT™ signals can consist of different sampling rates!

The sampling rate of all outputs now depends on the clock rate of the applied reference clock signal, which is selected in the »REFERENCE« menu. The example above shows the Word Clock selected as clock reference (default setting).

In this mode, the following clock references are available for synchronization of the internal SRCs:

- WCLK, SCLK
- AES11 (through separate input at the rear)
- ADAT™, SMUX2, SMUX4
- AES3 IN1–4, every of the AES3 stereo inputs
- Internal clock oscillator

To activate a clock source enter the »REFERENCE« menu and press the »SELECT« button repeatedly. When the external clock reference signal can be locked by the internal PLL circuit, the blue LED »LOCK₁« in the STATUS menu will light constantly. The clock rate of the selected clock source is displayed in the »REF CLOCK IN« menu under »1«.

Individual AES3 Input Signals

Running the MC-4 in the SRC mode, the clock rates of individual AES3 input signals can be totally different within a range of 25.0kHz to 200.0kHz. It is also not necessary to feed in signals at all four AES3 inputs. The input assignment is passed to the outputs.

| MODE | AUDIO IN | REFERENCE | | | |

Bidirectional format and sampling rate conversion between SMUX4 and an 8-channel AES3 signal referenced to the third AES3 input signal. The sampling rate of the reference clock signal and the format of the optical SMUX4 outputs are displayed in the »CLOCK IN« and »STATUS« menus.

ADAT™/ SMUX Adaption with SRC Option

Does the reference clock signal not exceed 50.0kHz, both optical outputs transmit the same ADAT™ signal and the MC-4 functions as ADAT™ signal splitter.

If the reference clock exceeds 50.0kHz, the optical output format will automatically change to »SMUX2« or »SMUX4«, depending on the reference signal's clock rate. The corresponding SMUX format of the optical outputs is displayed in the »STATUS« menu.

In this conversion mode, the MC-4 accepts the incoming AES3 signals with different sampling rates per stereo input. Due to this, it may be also useful to select one of the stereo inputs as reference clock for the internal SRCs!

The S/P-DIF interfaces do not have any function in these bidirectional conversion modes, due to the lack of simultaneous useable inputs and outputs!

| MODE | AUDIO IN | REFERENCE | | | |

Bidirectional format and sampling rate conversion between SMUX4 and an 8-channel AES3 signal. The AES3 signals are all referenced to the fourth AES3 input signal.

STATUS

This area displays different system conditions of your MC-4. There is no access for changing settings.

»LOCK₁« and »LOCK₂«

Doing unidirectional format conversions or bidirectional format conversions with SRC, the »LOCK₁« LED lights when the internal PLL circuit has detected the incoming digital audio signal or clock reference signal as valid. During bidirectional format conversions or the different X-SRC modes, the »LOCK₁« and »LOCK₂« LEDs light both, when the incoming digital audio signals are valid. As it is only possible to do bidirectional conversions between ADAT™ or SMUX2/4 and AES3, the first LED »LOCK₁« is assigned to the optical input and the second LED »LOCK₂« is assigned to the AES3 inputs.

If the digital audio or reference clock signal is unstable, the »LOCK₁« and/or »LOCK₂« LEDs do not light, the whole audio conversion process will be stopped and the digital audio outputs do not transmit any signals.

If the internal oscillator is selected as reference clock, the »LOCK₁« LED will light correspondingly.

»SMUX2 + SMUX4 ADAT OUT«

These two LEDs light correspondingly, if an SMUX2/4 signal with a sampling rate between 50.0kHz and 100.0kHz (SMUX2), or with a sampling rate between 100.0kHz and 200.0kHz (SMUX4) is output. These LEDs are not reporting any state of the optical inputs!

CLOCK IN

»1« + »2«

This area displays the incoming reference clock rates for the different states of operation of the MC-4.

When working with unidirectional format conversion only, the sampling rate of the digital audio signal, which is selected as reference, will be displayed under »1«. Doing unidirectional format and sampling rate conversion, the clock rate of the selected reference clock signal will be displayed »1« as well.

When working with bidirectional conversion modes, the two LED lines are pre-assigned for ADAT™ or SMUX2/4 with »1« and for AES3 signals with »2«.

If the internal oscillator supplies the reference clock for the SRCs, the clock rate which is selected in the »REFERENCE« menu will be displayed under »1«.
