8x8 HDMI 2.0 HDBaseT Matrix Switcher

Preface

Read this user manual carefully before using the product. Pictures shown in this manual are for reference only. Different models and specifications are subject to real product.

This manual is only for operation instruction, please contact the local distributor for maintenance assistance. The functions described in this version were updated till November, 2019. In the constant effort to improve the product, we reserve the right to make functions or parameters changes without notice or obligation. Please refer to the dealers for the latest details.

FCC Statement

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. It has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a commercial installation.

Operation of this equipment in a residential area is likely to cause interference, in which case the user at their own expense will be required to take whatever measures may be necessary to correct the interference.

Any changes or modifications not expressly approved by the manufacture would void the user's authority to operate the equipment.

SAFETY PRECAUTIONS

To ensure the best performance from the product, please read all instructions carefully before using the device. Save this manual for further reference.

- Unpack the equipment carefully and save the original box and packing material for possible future shipment.
- Follow basic safety precautions to reduce the risk of fire, electrical shock and injury to persons.
- Do not dismantle the housing or modify the module. It may result in electrical shock or burn.
- Using supplies or parts not meeting the specifications of product may cause damage, deterioration or malfunction.
- Refer all servicing to qualified service personnel.
- To prevent fire or shock hazard, do not expose the unit to rain, moisture or install this product near water.
- Do not put any heavy items on the extension cable in case of extrusion.
- Do not remove the housing of the device as opening or removing housing may expose you to dangerous voltage or other hazards.
- Install the device in a place with fine ventilation to avoid damage caused by overheat.
- Keep the module away from liquids.
- Spillage into the housing may result in fire, electrical shock, or equipment damage. If an object or liquid falls or spills on to the housing, unplug the module immediately.
- Do not twist or pull by force ends of the optical cable. It can cause malfunction.
- Do not use liquid or aerosol cleaners to clean this unit. Always unplug the power to the device before cleaning.
- Unplug the power cord when left unused for a long period of time.
- Information on disposal for scrapped devices: do not burn or mix with general household waste, and please treat them as normal electrical wastes.

Table of Contents

1. Product Introduction

Thanks for choosing the professional 8x8 HDMI 2.0 HDBaseT matrix switcher with eight receivers! The matrix is an eight-input by eight-output HDBaseT and HDMI matrix with HDCP 2.2 and up to 4K/UHD@60Hz video support. It transmits 4K video to distances up to 131 feet (40 meters) and 1080p video to distances up to 230 feet (70 meters) over a single CATx Ethernet cable. The eight HDBaseT outputs support 24V Power over Cable (PoC) feature, allowing the receivers to draw their power from the matrix over the HDBaseT cable.

The matrix switcher features comprehensive EDID management and advanced HDCP handing to ensure maximum functionality with a wide range of video sources.

The matrix switcher not only supports bi-directional IR, RS232 extension but also has IR, RS232, and TCP/IP control options.

The product provides performance in control and transmission, which could be used in a number of different installation scenarios, for example, with computers, for monitoring purposes, large screen displays, conference systems, television education, bank security institutions, etc.

1.1 Features

- 8x8 HDBaseT matrix switcher with audio matrix.
- Fully compliant with the HDMI 2.0 and HDCP 2.2.
- Supports HDMI resolution up to 4K@60Hz 4:4:4, HDR10.
- Features eight mirrored HDMI outputs for eight HDBaseT outputs, and the eight HDMI outputs support 4K to 1080p down-scaling.
- The eight HDBaseT outputs support 24V PoC, allowing the receivers to draw their power from the matrix switcher over the HDBaseT cable.
- Transmits 4K signal to the distance up to 131 feet (40 meters) and 1080p signal to the distance up to 230 feet (70 meters) over a single CATx Ethernet cable.
- Supports audio matrix. Provides eight digital SPDIF audio outputs and eight analog L+R audio outputs for HDMI input audio de-embedding and HDBaseT output audio de-embedding. Moreover, the eight digital SPDIF audio outputs supports ARC audio output from receivers.
- Volume adjustment for analog L+R audio outputs.
- Supports comprehensive EDID management and advanced HDCP handling.
- Controllable via front panel buttons, RS232 local and pass-through, IR local and pass-through, CEC, and TCP/IP (built-in GUI).

2.1 Matrix Switcher

Video Input	
Input	(8) HDMI
Input Connector	(8) Type-A female HDMI
HDMI Input Resolution	Up to 4Kx2K@60Hz 4:4:4, HDR10,1080p 3D
Video Output	
Output	(8) HDBaseT, (8) HDMI
Output Connector	(8) RJ45, (8) Type-A female HDMI
HDMI Output Resolution	Up to 4Kx2K@60Hz 4:4:4, HDR10, 1080p 3D. Supports 4K to 1080p down-scaling.
HDBaseT Output Resolution	Up to 4Kx2K@60Hz 4:2:0
HDMI Audio Signal	LPCM 7.1 audio, Dolby Atmos®, Dolby® TrueHD, Dolby Digital® Plus, DTS:X™, and DTS-HD® Master Audio™ pass-through.
Audio Output	
Output	(8) Stereo analog L+R audio, (8) Digital SPDIF audio
Output Connector	(8) 3-pin terminal blocks, (8) Toslink connectors
Analog L+R Audio Format	Supports PCM
Digital SPDIF Audio Format	Supports PCM, Dolby Digital, DTS, DTS-HD
Local Audio Sampling Rate	Supports 44.1KHz, 48KHz, 96KHz
ARC Audio Sampling Rate	Supports 48KHz, 96KHz
Frequency Response	20Hz – 20KHz, ±3dB
Audio Output Impedance	70Ohms
Max Input Level	**L+R:** 2.0Vrms ± 0.5dB. 2V = 16dB headroom above -10dBV (316mV) nominal consumer line level signal. **SPDIF:** ±0.05dBFS.

3. Panel Description

3.1 Matrix Switcher Front Panel
① **LCD Screen:** Presents real-time operation status.

② **Power LED:** Illuminates RED when the device is in standby mode, illuminates GREEN when device is powered on.

③ **IR Sensor and its LED:** Illuminates RED when the IR sensor receives an IR signal from the IR remote to control the matrix switcher. The IR sensor is on the right side of the LED.

④ **INPUT:** Eight buttons for input source selection.

⑤ **OUTPUT:** Eight buttons for output channel selection.

⑥ **Menu Buttons:**

- LOCK: Lock or unlock the front panel buttons.
- PRESET: Preset setting.
- MENU/↵: Menu or confirm button.
- BACK: Go back to the previous operation.
- UP: Page up.
- DOWN: Page down.

3.2 Matrix Switcher Rear Panel
① **INPUT:** Eight type-A female HDMI input ports to connect HDMI sources.

② **AUDIO MATRIX OUT/ARC:** Eight 3-pin terminal blocks and eight Toslink connectors to connect speakers or amplifiers for HDMI input audio de-embedding or HDBaseT output audio de-embedding, and the eight Toslink connectors can also be used for ARC audio output from HDBaseT receivers. They can make up an audio matrix to be set by front panel buttons, GUI or RS232 commands.

③ **OUTPUT:** Eight HDBaseT RJ45 outputs to connect the eight HDBaseT receivers, and eight local HDMI ports to connect local displays.

④ **CONTROL:**
- RS232: 3-pin terminal block to connect the control device (e.g. PC) to control the matrix switcher by RS232 commands.
- IR EYE: 3.5mm jack to connect IR receiver to control the matrix switcher by the IR remote.
- FW: Type-A USB port for firmware upgrade.
- TCP/IP: RJ45 port to connect the control device (e.g. PC) to control the matrix switcher by GUI.

⑤ **RS232:** Eight 3-pin terminal blocks to control the third-party devices base on RS232 pass-through feature. There is a one-to-one correspondence between the eight RS232 ports and the eight RS232 ports of eight HDBaseT receivers.

⑥ **IR IN:**
- 1~8: Eight 3.5mm jacks to connect eight IR receivers. Each IR input is associated with the respective HDBaseT output and cannot be switched separately. It makes up a bi-directional IR transmission with the IR OUT on the corresponding HDBaseT receiver.
- ALL IN: 3.5mm jack to connect the IR receiver to transmit the IR signal from the ALL IN port to all HDBaseT receivers.

⑦ **IR OUT:**
- 1~8: Eight 3.5mm jacks to connect eight IR emitters to send the IR signal received from the corresponding HDBaseT receivers.
- ALL OUT: 3.5mm jack to connect the IR emitter to send the IR signal received from all HDBaseT receivers.

⑧ **AC100V~240V:** Power port to connect an AC 100V~240V power by the power cord.

⑨ **GROUND:** Connect to earth to ensure the unit is well grounded.

3.3 Receiver Front and Rear Panel
① **Power LED:** The LED illuminates red when power is applied.

② **ARC Mode:** Press the button with paper clip or other sharp tool to enable the ARC mode, and then the left LED illuminates blue. Press it again to exit the ARC mode and the LED is off. When the ARC audio is selected as the audio source for the SPDIF output of matrix switcher, the ARC mode will be enabled automatically.

③ **ARC Audio In:** Toslink connector to connect ARC audio source device (e.g.TV).

④ **FW:** Micro-USB port for firmware upgrade.

⑤ **HDMI Out:** Type-A female HDMI output port to connect HDMI display (e.g.TV).

⑥ **Audio Breakout:** If the ARC mode is OFF, the Toslink connector is connected to speaker or amplifier for HDMI source audio de-embedding. Note that if the ARC mode is ON, this port has no audio output.

⑦ **IR In:** 3.5mm jack to connect the IR receiver for IR pass-through.

⑧ **IR Out:** 3.5mm jack to connect the IR emitter for IR pass-through.

⑨ **RS232:** 3-pin terminal block to connect the RS232 control device (e.g. PC) or a third-party device to be controlled.

⑩ **HDBT In:** RJ45 port to connect the HDBT output port of switcher/transmitter by CATx Ethernet cable. The LINK LED illuminates orange when there is a valid

8

HDBaseT link between the switcher/transmitter and the receiver. The HDCP LED illuminates green when the video contains HDCP content.

⑪ **DC 24V:** DC connector for the power adapter connection. If the switcher/transmitter is connected to the power adaptor, the receiver doesn't need to connect power adaptor due to the HDBT output port of switcher/transmitter supports 24V PoC output.

4. System Connection

4.1 Usage Precaution

- Make sure all components and accessories included before installation.
- System should be installed in a clean environment with proper temperature and humidity.
- All of the power switches, plugs, sockets, and power cords should be insulated and safe.
- All devices should be connected before power on.

4.2 System Diagram

The following diagram illustrates typical input and output connections that can be utilized with this matrix switcher:
5. Button Control

The matrix switcher can be controlled by using the buttons on the front panel. Whenever a command is accepted, the indicators of all the buttons pressed will blink three times then they will go off. If the command fails, the indicators will go off immediately without blinking.

5.1 Signal Switching

● **Switch an input to an output**

Operation: INPUT# + OUTPUT# + MENU/↵

Example: Switch Input 1 to Output 2:

Press **INPUT 1** ⟶ SWITCH:1 -> ⟶ Press **OUTPUT 2**

⟶ SWITCH:1 -> 2 ⟶ Press MENU/↵ to confirm.

Note: In default status, 8 IR OUT ports correspond with 8HDMI INPUTS. When you switch an HDMI input, the corresponding IR OUT will be switched synchronously.
● **Switch an input to several outputs**
Operation: INPUT# + OUTPUT# + OUTPUT# +… + MENU/↵
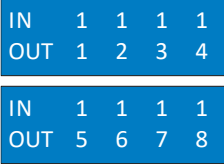

Example: Switch Input 1 to Output 2, 3, and 4.

Press **INPUT 1** ⟶ SWITCH:1 -> ⟶ Press **OUTPUT 2**, **3**, **4**

⟶ SWITCH:1 -> 2 3 4 ⟶ Press MENU/↵ to confirm.

5.5 Audio Setting

The matrix switcher provides eight analog L+R audio output ports and eight digital SPDIF output ports for audio de-embedding. The audio source selection of these eight audio output ports, and the L+R audio volume can be controlled by the front panel buttons.

● **Audio Source Selection**

There are sixteen audio sources can be selected for any analog L+R audio output port, and twenty-four audio sources can be selected for any SPDIF audio output port.

6. GUI Control

The switcher can also be controlled via TCP/IP. The default IP settings are:

IP Address: 192.168.0.178

Subnet Mask: 255.255.255.0

Type *192.168.0.178* in the internet browser, it will enter the below log-in webpage:

Username: admin

Password: admin

Type the username and password, and then click **Login** to enter the section for video switching.

6.1 Signal Switching

Use the 8x8 button grid on the page to set which inputs are directed to which outputs. For example, clicking the button on the Input 1 row and Output 1 column, directs input 1 to output 1.

Use the 9 numbered buttons under scene area to save and load layout presets.

- To save a given layout, first click one of the numbered buttons, then click the **Save** button.
- To load a previously saved layout, first click one of the numbered buttons, then click the **Recall** button.
6.2 Audio Setting

● **Audio Source Selection**
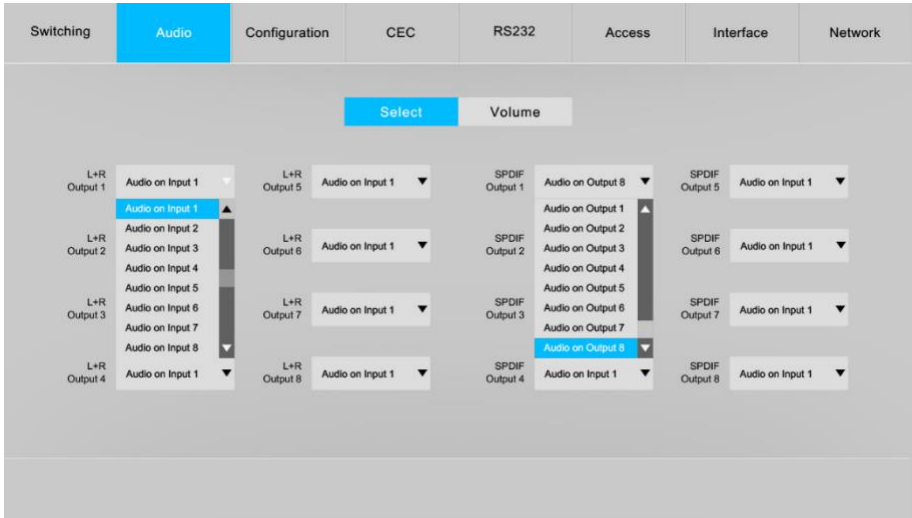

• There are sixteen audio sources can be selected for eight analog L+R audio output ports, and twenty-four audio sources can be selected for eight digital SPDIF output ports.

- **L+R Output Audio Volume Control**
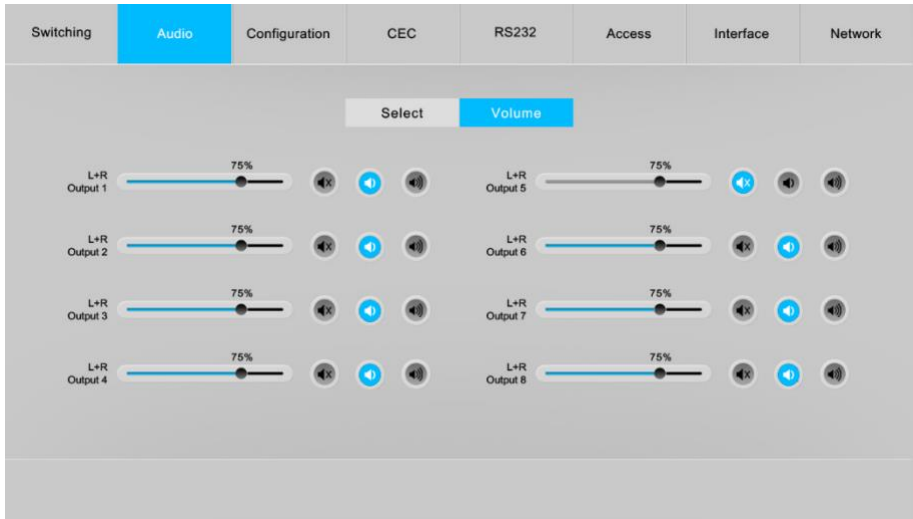

- Adjust L+R output audio volume by the volume bar and the three buttons on the right side.

6.3 Configuration

6.3.1 Down-scaling
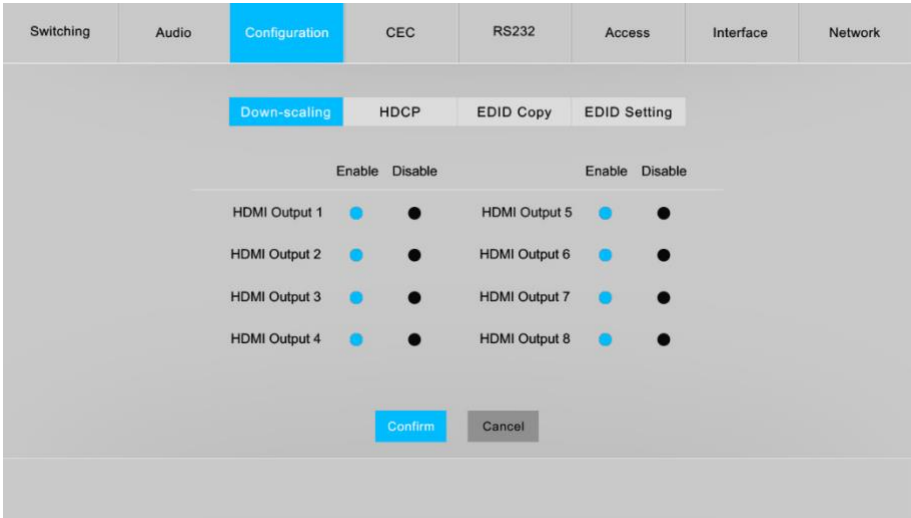

- Enable/disable video resolution down-scaling function of HDMI output 1~8 ports.

  When enable down-scaling, the 4K input can be automatically degraded to 1080p output for compatibility with 1080p display which is connected to the HDMI output port.

6.3.2 HDCP Setting
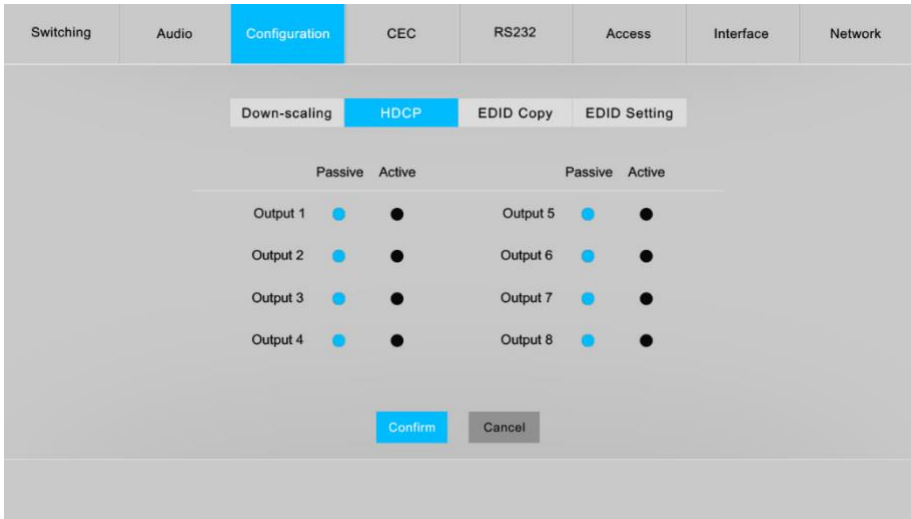

• Set the HDCP mode of HDMI and HDBaseT outputs to **Passive** or **Active**.

Mode	Description
Passive	Automatically follows the HDCP version of source device.
Active (Default)	• If the input video has HDCP content, the HDCP version of HDMI output is HDCP 1.4 for broader video solution. • If the input video has no HDCP content, the HDMI output has no HDCP too.

Click **Confirm** to save any changes or click **Cancel** to cancel any changes that have been made.

Operation:

1) Select a built-in EDID.

2) Select one or several input ports. Press **ALL** to select all input ports.

3) Click **Confirm** to save setting.

- Upload user-defined EDID by the below steps:

1) Prepare the EDID file (.bin) on the control PC.

2) Select the **User-defined**.

3) Click the box `.bin`, and then select the EDID file (.bin) according the tooltip.

4) Click **Apply** to upload the user-defined EDID, and then click **Confirm** to save setting.

6.4 CEC Control

If the input source devices, HDBaseT output devices and local HDMI output devices support CEC, they can be controlled via the following CEC interface.

1) Input Source Device Control
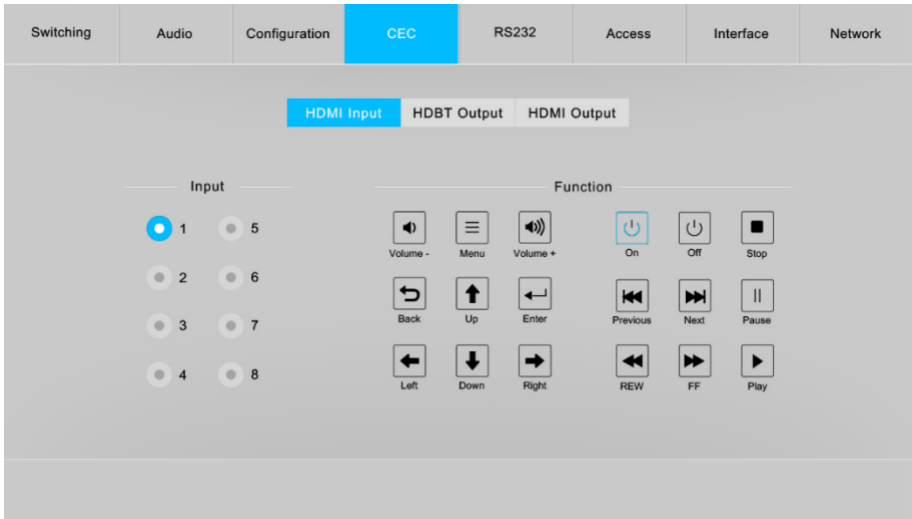

- Select one or several HDMI input source devices to be controlled, and then press function buttons.

2) HDBT Output Device Control
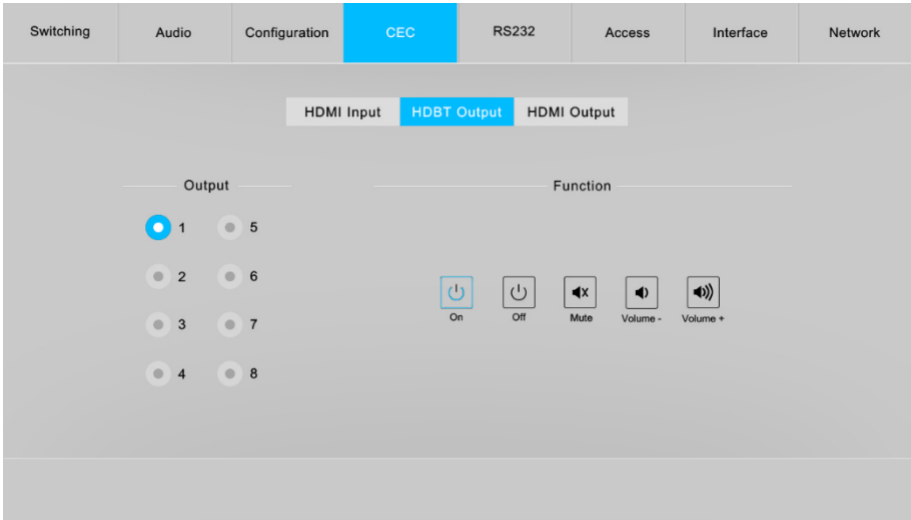

- Select one or several HDBaseT output devices to be controlled, and then press function buttons.

3) HDMI Output Device Control
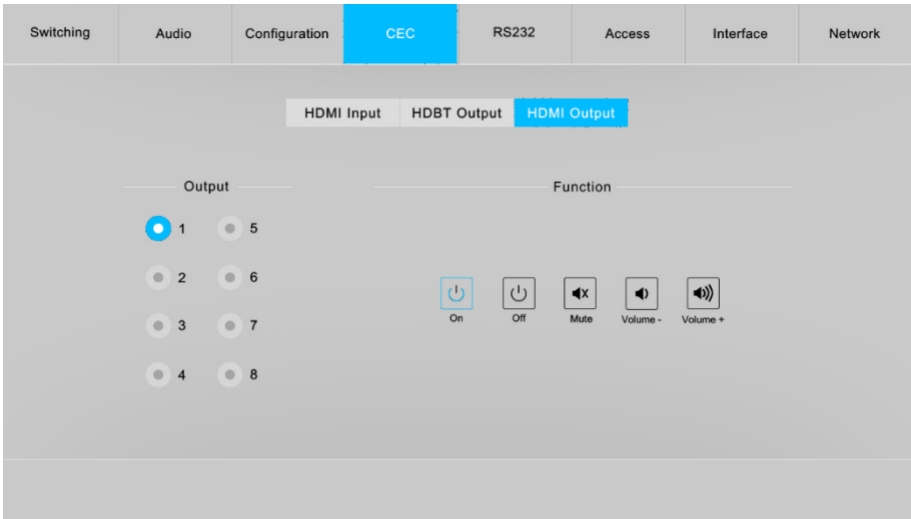

- Select one or several HDMI output devices to be controlled, and then press function buttons.

6.5 RS232 Control

● Send RS232 commands to control third-party devices which are connected to the far-end HDBaseT receivers.

Operation:

1) Select the HDBaseT port which is connected to HDBaseT receiver which must have third-party device attached.

2) Set the baud rate.

3) Typing the commands in the box to control the selected remote third-party device which is connected to HDBaseT receiver. If click the **Hex**, the RS232 commands can be typed with hexadecimal value.

4) Click **Send** to transmit RS232 command to the selected HDBaseT port.

6.6 Access Setting

- Reset the login admin and user password.
- Lock or unlock the front panel buttons.
- Get the GUI and firmware version.

Click **Confirm** to save any changes or click **Cancel** to cancel any changes that have been made.

6.7 Interface Setting

- Modify title bar label, LCD readout and button labels.

Click **Confirm** to save any changes or click **Cancel** to cancel any changes that have been made.

6.8 Network Setting

- Modify the static IP Address, Subnet Mask, and Gateway.

6.9 GUI Upgrade

Please visit at http://192.168.0.178:100 for GUI online upgrade.

Type the username and password (the same as the GUI log-in setting, modified password will be available only after rebooting) to login the configuration interface. After that, click **Administration** in the source menu to get to **Upload Firmware** as shown below:

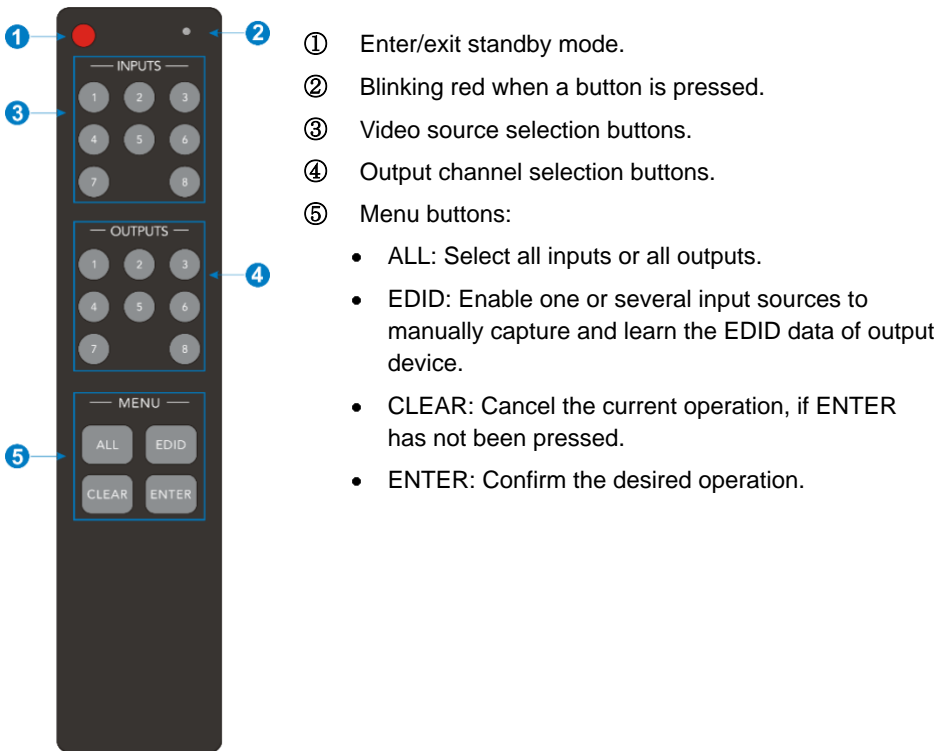

Select the update file and click **Apply** button, and then it will start upgrade process.

7. IR Control

7.1 IR Remote Control

The matrix switcher has a built-in IR sensor on the front panel for receiving IR control signal from IR remote. In addition, it also provides IR EYE port on the rear panel to connect an external IR receiver for IR local control.

The matrix switcher can be controlled by the below IR Remote:

① Enter/exit standby mode.

② Blinking red when a button is pressed.

③ Video source selection buttons.

④ Output channel selection buttons.

⑤ Menu buttons:

- ALL: Select all inputs or all outputs.

- EDID: Enable one or several input sources to manually capture and learn the EDID data of output device.

- CLEAR: Cancel the current operation, if ENTER has not been pressed.

- ENTER: Confirm the desired operation.

Note: The IR receivers which are connected to HDBaseT receivers also can receive the IR signal of the IR remote, so the matrix switcher also can be controlled by the IR remote at the far-end HDBaseT receivers' position. The IR remote-control mode can be enabled or disabled by sending RS232 command "IRRCM[XX]ON."/ "IRRCM[xx]OFF." ([xx]=00~04). Please refer to the 8.3.1 System Control for more details.

7.2 IR Pass-through Control

The matrix switcher supports bi-directional IR pass-through, allowing the devices can be controlled by both source and destination ends. This section provides connection and switching examples to illustrate possible configurations.
7.2.1 Control Local Input Device from Remote

The same basic principle applies when controlling the local input device from the remote location.
● **Control local input device through IR OUT port**

Example: Switch HDMI input 3 to HDBaseT output 4.

Connect an IR receiver to **IR IN** port on the receiver, then connect an IR emitter to the **IR OUT 3** on the matrix switcher. The third input source can be controlled through its corresponding IR output port. The connection diagram shown as below:

- **Control local input device through IR ALL OUT port**

The emitter can be connected to the **IR ALL OUT** port on matrix switcher to control all local input devices. In this case, the IR receiver must be connected to the **IR IN** port on each connected HDBaseT receiver, as shown in the diagram below:
7.2.2 Control Remote Output Device from Local

The remote displays can be controlled from the local matrix switcher location.

● **Control remote device through IR IN port**

Example: Switch HDMI input 3 to HDBaseT output 3.

Connect an IR receiver to **IR IN 3** port on the matrix switcher, then connect an IR emitter to the **IR OUT** on the receiver, as shown in the diagram below:

- **Control remote device through IR ALL IN port**

The receiver can be connected to the **IR ALL IN** port on matrix switcher to control all remote output devices. In this case, the IR emitter must be connected to the **IR OUT** port on each connected HDBaseT receiver, as shown in the diagram below:
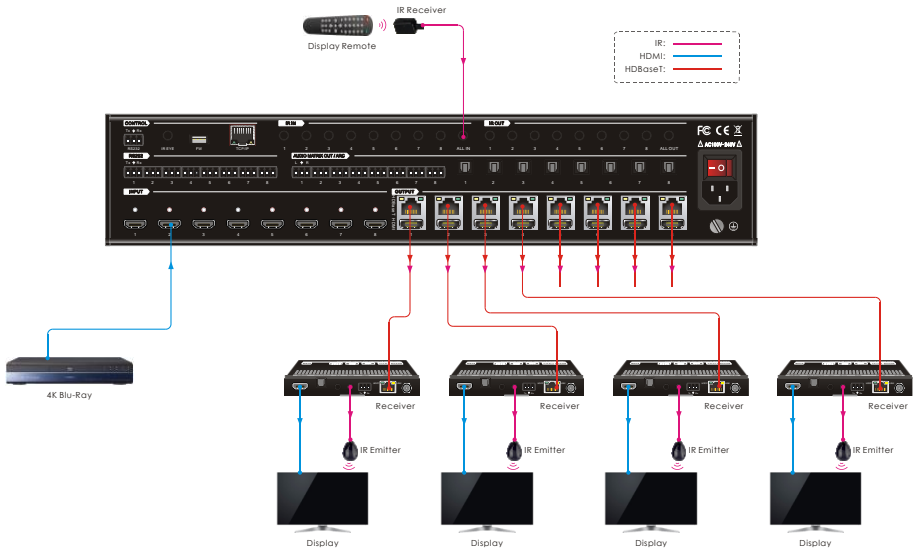

8. RS232 Control

## 8.1 RS232 Control Connection

8.1.1 Control the Matrix Switcher from Local

To control the matrix switcher from a local PC, the **3-pin to DB9 RS232 Cable** is used to connect between the matrix and PC. The connection diagram is shown as below:

### 8.1.2 Control the Matrix Switcher from Remote

To control the matrix switcher from remote location, please connect one or more PCs to the **RS232** ports of HDBaseT receivers with the **3-pin to DB9 RS232 Cables**. The matrix switcher can be controlled by any one of PCs, the connection diagram is shown as below:
*Note: The command "**RS232RCM[XX]ON.**" ([xx]=00~04) needs to be sent to enable or disable this control mode. For example, send the command "**RS232RCM00ON.**" to enable the remote-control mode for all HDBaseT outputs, and send the command "**RS232RCM00OFF.**" to disable the remote-control mode for all HDBaseT outputs. Please refer to the 8.3.1 System Control for more details.*

8.1.3 Control the Remote Third-party Device from Local

To control a third-party device from local, first determine which HDBaseT receiver is connected to (1 in the diagram below). Next, connect a PC to the corresponding **RS232** port of matrix switcher with **3-pin to DB9 RS232 Cable**, then connect a third-party device (e.g. projector) to the **RS232** port of the determined HDBaseT receiver. The remote third-party device can be controlled by the local PC, the connection diagram is shown as below:
8.1.4 Control the Local Third-party Device from Remote

To control a third-party device from remote, first determine which HDBaseT receiver is connected to (1 in the diagram below). Next, connect a PC to the **RS232** port of HDBaseT receiver with **3-pin to DB9 RS232 Cable**, then connect a third-party device (e.g. projector) to the **RS232** port of matrix switcher. The local third-party device can be controlled by the remote PC, the connection diagram is shown as below:
8.2 RS232 Control Software

If the matrix switcher and third-party devices needs to be controlled from PC by an RS232 connection, a RS232 control software should be installed in PC. Here using **CommWatch.exe** as an example. The icon is shown as below:

CommWatch.exe

Double-click the icon to run, and its interface is depicted below:
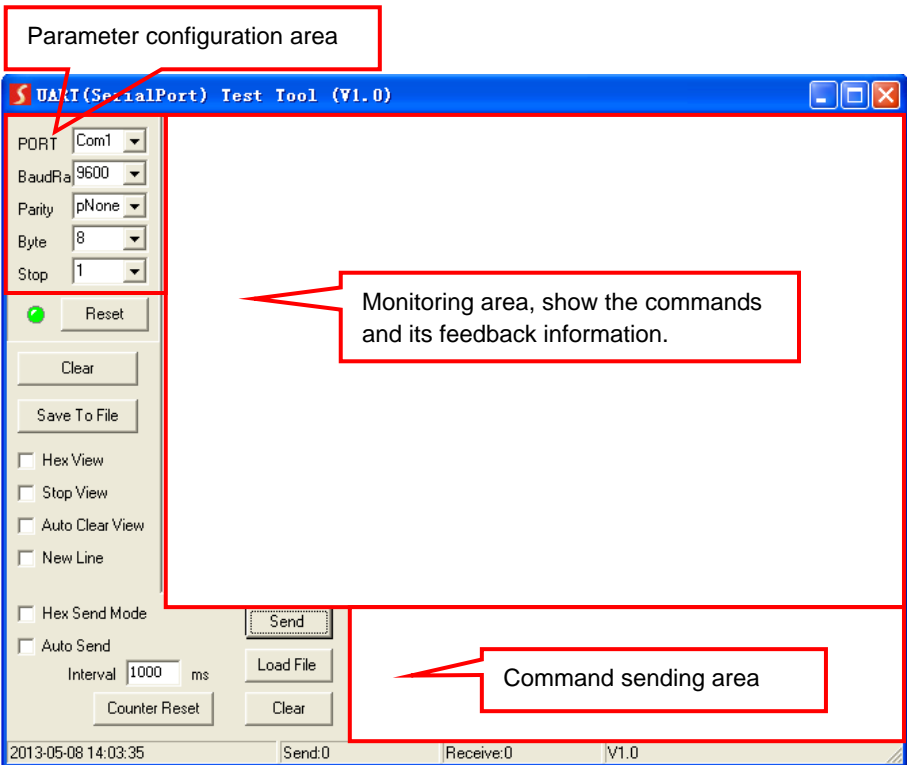

Please set the parameters of COM number, bound rate, data bit, stop bit and the parity bit correctly, and then you are able to send command in command sending area.

8.3 RS232 Commands

When controlling the matrix, the serial port settings for all RS232 commands is:

Baud rate: 9600   Data bit: 8   Stop bit: 1   Parity bit: none

The matrix switcher can be controlled by sending the following RS232 commands:

CMDOFF/+[X]/[YY]:x xx.	When power off the matrix switcher, automatically send ASCII command "xxx" to power off far-end third-party device. ● xxx: ASCII string. ● The "[X]=1~7" represents the baud rate of third-party device. [X]=1, the baud rate is 2400 [X]=2, the baud rate is 4800 [X]=3, the baud rate is 9600 [X]=4, the baud rate is 19200 [X]=5, the baud rate is 38400 [X]=6, the baud rate is 57600 [X]=7, the baud rate is 115200 ● The "[YY]=00" represents all HDBT outputs. ● The "[YY]=01~08" represents the HDBT output 1~8.	CMDOFF/+3/01:123456. When power off the matrix switcher, automatically send ASCII command "123456" to the far-end third-party device. The third-party device is connected to the far-end HDBaseT receiver of connecting the HDBT output 1 port.

8.3.7 CEC Control

If the input sources, HDBaseT output devices and local HDMI output devices are supports CEC, they can be controlled by sending the following command instead of IR remote.

CEC[I/O][AA][BB][CC][DD].
