Setting the DDC

DDC provides plug-and-play capability to your displays. When you plug a display into your computer, the DDC table in the display tells the computer the optimal resolution to use. The DVX-200 is capable of supporting two primary types of displays: PC and Mac. The default setting is PC.

To change this setting, first remove the top cover from the DVX-200 TRANSMITTER by removing the four side screws. Next, locate the DIP switches near the rear of the device next to the Data Port (RJ45 Ethernet Port).

For PC, configure the switches as shown below:

1&2 ON, 3&4 OFF

For Mac, configure the switches as shown below:

1&2 OFF, 3&4 ON
